TARCO adds the Peterbilt 220 truck to its Typhoon Leaf Collection Line

Everyone would agree. The “cab over” design with its tight turning radius and ability to maneuver difficult driving situations is the best choice for daily street pickup. Then add to this compact design, drive comfort, easy service, and great visibility, and you have the best choice for Municipal Leaf Collection chores.

TARCO’s Typhoon Leaf collection unit can now be installed on the Peterbilt 220. This offers some major advantages for leaf collection.

- Available in” right hand steer only” eliminates the expense of adding another steering wheel set up. The truck is operated from the right side for best visibility for leaf collection.
- Front panel opens for quick access for all your daily checks.
- The 220 is rated for 30,000 to 33,000 GVW and is ideal for a 20 to 25 Cu. Yd. box
- Entry is quick and easy even when the leaf hose is locked in travel position.
- Ample mirrors and a rear camera increase visibility and operator confidence

Peterbilt 220 “Cab-over” design

Right hand Steering Only
